

## Erratum

**J. F. Rosen, M. E. Markowitz, P. E. Bijur, S. T. Jenks, L. Wielopolski, J. A. Kale-Ezra, and D. N. Slatkin.** Sequential Measurements of Bone Lead Content by L X-Ray Fluorescence in CaNa<sub>2</sub>EDTA-Treated Lead-Toxic Children. *Environmental Health Perspectives*, 91: 57-62 (1990).

Figure 2 is incomplete in that only part A was printed. Parts B, C, and D were inadvertently omitted. The figure is printed below in its entirety.

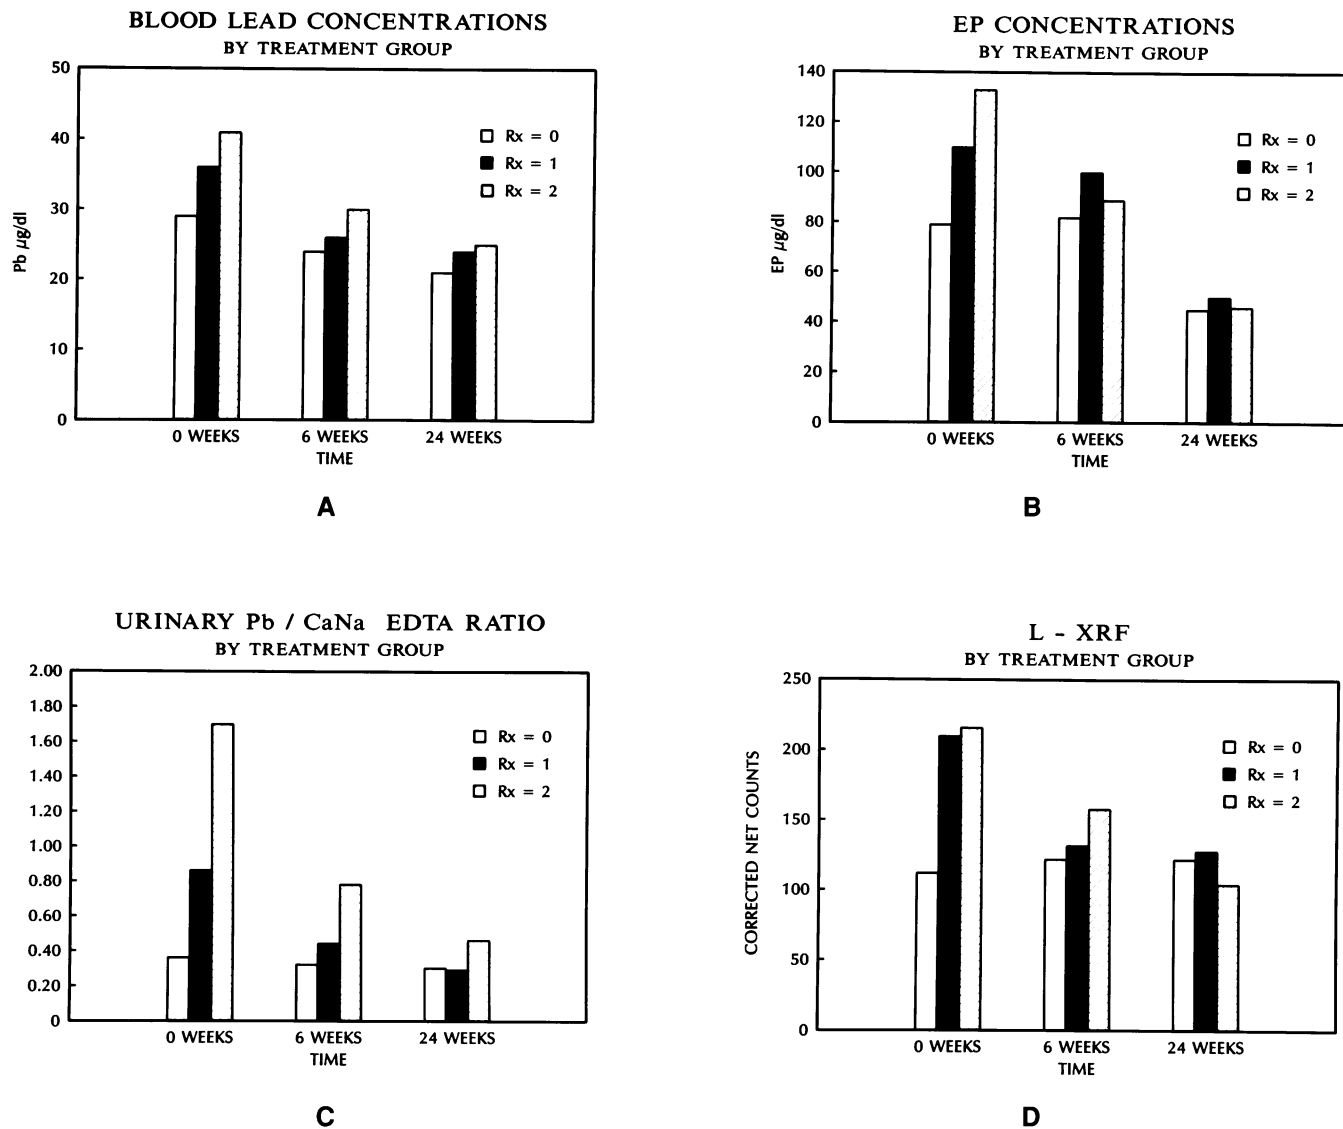

FIGURE 2. Sequential values for (A) PbB, (B) EP, (C) PbU/EDTA ratios, and (D) net corrected LXRF counts are shown in children at enrollment and 6 weeks and 6 months after enrollment. Rx = 0 indicates lead-toxic children who did not qualify for CaNa<sub>2</sub>EDTA treatment; Rx = 1 represents children treated with one in-hospital course of CaNa<sub>2</sub>EDTA after obtaining baseline values at enrollment; and Rx = 2 indicates lead-toxic children treated in the hospital with CaNa<sub>2</sub>EDTA after baseline values were obtained at enrollment and again 6 weeks postenrollment.
